

ECOLOGICAL SAFETY AS A SUBSYSTEM OF NATIONAL SAFETY

Zoran Todorović

Summary: The paper indicates the importance of ecological safety valorization as a segment of total safety in the Republic of Serbia as well as the fact that in this area of safety a significant importance had already been given in some basic conceptual and doctrinal acts of the neighboring countries. The incompleteness of normative and institutional milieu which should evaluate the importance of ecological safety, environmental protection and protection of natural resources that are safety elements, has also been indicated. This paper also points out to some safety "connection points" that connect the system of environmental protection and improvement, on the one hand and safety system of the Republic of Serbia, on the other.
