

## CAPACITIES FOR RESPONDING TO EXTREME METEOROLOGICAL EVENTS IN MONTENEGRO

Zoran Begović

**Summary:** Extreme weather phenomena are becoming, in recent times, a very important link in the development of any society and they take into account: drought, floods and associated landslides, storms, cyclones and tornadoes, ocean waves, heat and cold waves. In Montenegro, as a Mediterranean country, extreme weather events have become an integral part of life for citizens. In this sense, they represent the high winds, extreme precipitation and air temperature, icing, fog and dry. For this reason, one of the most important response to emergencies, in Montenegro, is a response to extreme weather events.
